

The University of the State of New York
REGENTS HIGH SCHOOL EXAMINATION

PHYSICAL SETTING CHEMISTRY

Wednesday, January 28, 2015 — 1:15 to 4:15 p.m., only

The possession or use of any communications device is strictly prohibited when taking this examination. If you have or use any communications device, no matter how briefly, your examination will be invalidated and no score will be calculated for you.

This is a test of your knowledge of chemistry. Use that knowledge to answer all questions in this examination. Some questions may require the use of the *2011 Edition Reference Tables for Physical Setting/Chemistry*. You are to answer *all* questions in all parts of this examination according to the directions provided in this examination booklet.

A separate answer sheet for Part A and Part B-1 has been provided to you. Follow the instructions from the proctor for completing the student information on your answer sheet. Record your answers to the Part A and Part B-1 multiple-choice questions on this separate answer sheet. Record your answers for the questions in Part B-2 and Part C in your separate answer booklet. Be sure to fill in the heading on the front of your answer booklet.

All answers in your answer booklet should be written in pen, except for graphs and drawings, which should be done in pencil. You may use scrap paper to work out the answers to the questions, but be sure to record all your answers on your separate answer sheet or in your answer booklet as directed.

When you have completed the examination, you must sign the statement printed on your separate answer sheet, indicating that you had no unlawful knowledge of the questions or answers prior to the examination and that you have neither given nor received assistance in answering any of the questions during the examination. Your answer sheet and answer booklet cannot be accepted if you fail to sign this declaration.

Notice. . .

A four-function or scientific calculator and a copy of the *2011 Edition Reference Tables for Physical Setting/Chemistry* must be available for you to use while taking this examination.

DO NOT OPEN THIS EXAMINATION BOOKLET UNTIL THE SIGNAL IS GIVEN.

Part A

Answer all questions in this part.

Directions (1–30): For each statement or question, record on your separate answer sheet the number of the word or expression that, of those given, best completes the statement or answers the question. Some questions may require the use of the 2011 Edition Reference Tables for Physical Setting/Chemistry.

- 24 Which reaction produces ethanol?
- (1) combustion (3) fermentation
(2) esterification (4) polymerization
- 25 The chemical process in which electrons are gained by an atom or an ion is called
- (1) addition (3) reduction
(2) oxidation (4) substitution
- 26 Which process occurs in an operating voltaic cell?
- (1) Electrical energy is converted to chemical energy.
(2) Chemical energy is converted to electrical energy.
(3) Oxidation takes place at the cathode.
(4) Reduction takes place at the anode.
- 27 What can be explained by the Arrhenius theory?
- (1) the behavior of many acids and bases
(2) the effect of stress on a phase equilibrium
(3) the operation of an electrochemical cell
(4) the spontaneous decay of some nuclei
- 28 According to one acid-base theory, a water molecule acts as an acid when the molecule
- (1) donates an H^+ ion
(2) accepts an H^+ ion
(3) donates an OH^- ion
(4) accepts an OH^- ion
- 29 Positrons and beta particles have
- (1) the same charge and the same mass
(2) the same charge and different masses
(3) different charges and the same mass
(4) different charges and different masses
- 30 Which term identifies a type of nuclear reaction?
- (1) transmutation (3) deposition
(2) neutralization (4) reduction

Part B-1

Answer all questions in this part.

Directions (31–50): For each statement or question, record on your separate answer sheet the number of the word or expression that, of those given, best completes the statement or answers the question. Some questions may require the use of the 2011 Edition Reference Tables for Physical Setting/Chemistry.

- 33 The numbers of protons and neutrons in each of four different atoms are shown in the table below.

Protons and Neutrons in Four Different Atoms

Atom	Number of Protons	Number of Neutrons
A	8	8
D	9	9
E	9	10
G	10	10

Which two atoms represent isotopes of the same element?

- 34 Which elements have the most similar chemical properties?

- (1) boron and carbon
 - (2) oxygen and sulfur
 - (3) aluminum and bromine
 - (4) argon and silicon

- 35 Which element reacts with oxygen to form ionic bonds?

- 36 The table below gives the atomic mass and the abundance of the two naturally occurring isotopes of chlorine.

Naturally Occurring Isotopes of Chlorine

Isotopes	Atomic Mass of the Isotope (u)	Natural Abundance (%)
^{35}Cl	34.97	75.76
^{37}Cl	36.97	24.24

Which numerical setup can be used to calculate the atomic mass of the element chlorine?

- (1) $(34.97 \text{ u})(75.76) + (36.97 \text{ u})(24.24)$
 - (2) $(34.97 \text{ u})(0.2424) + (36.97 \text{ u})(0.7576)$
 - (3) $(34.97 \text{ u})(0.7576) + (36.97 \text{ u})(0.2424)$
 - (4) $(34.97 \text{ u})(24.24) + (36.97 \text{ u})(75.76)$

- 37 Which general trends in first ionization energy and electronegativity values are demonstrated by Group 15 elements as they are considered in order from top to bottom?

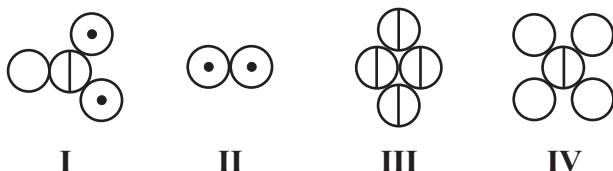

- (1) The first ionization energy decreases and the electronegativity decreases.
 - (2) The first ionization energy increases and the electronegativity increases.
 - (3) The first ionization energy decreases and the electronegativity increases.
 - (4) The first ionization energy increases and the electronegativity decreases.

- 38 An aluminum sample has a mass of 80.01 g and a density of 2.70 g/cm^3 . According to the data, to what number of significant figures should the calculated volume of the aluminum sample be expressed?

39 Given four particle models:

Key

○ = an atom of element T
● = an atom of element X
◐ = an atom of element Z

Which two models can be classified as elements?

40 After being thoroughly stirred at 10.°C, which mixture is heterogenous?

- (1) 25.0 g of KCl and 100. g of H₂O
 - (2) 25.0 g of KNO₃ and 100. g of H₂O
 - (3) 25.0 g of NaCl and 100. g of H₂O
 - (4) 25.0 g of NaNO₃ and 100. g of H₂O

41 Which two compounds are electrolytes?

- (1) KOH and CH_3COOH
 (2) KOH and C_5H_{12}
 (3) CH_3OH and CH_3COOH
 (4) CH_3OH and C_5H_{12}

42 Which statement explains why a CO_2 molecule is nonpolar?

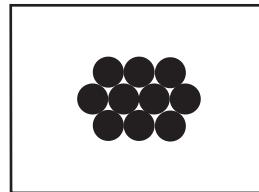

- (1) Carbon and oxygen are both nonmetals.
 - (2) Carbon and oxygen have different electronegativities.
 - (3) The molecule has a symmetrical distribution of charge.
 - (4) The molecule has an asymmetrical distribution of charge.

43 Which temperature change indicates an increase in the average kinetic energy of the molecules in a sample?

- (1) 15°C to 298 K (3) 305 K to 0°C
 (2) 37°C to 273 K (4) 355 K to 25°C

44 Given the particle diagram:

Key

Which substance at STP can be represented by this particle diagram?

45 Which type of equilibrium exists in a sealed flask containing $\text{Br}_2(\ell)$ and $\text{Br}_2(g)$ at 298 K and 1.0 atm?

- (1) static phase equilibrium
 - (2) static solution equilibrium
 - (3) dynamic phase equilibrium
 - (4) dynamic solution equilibrium

46 What are the products when potassium hydroxide reacts with hydrochloric acid?

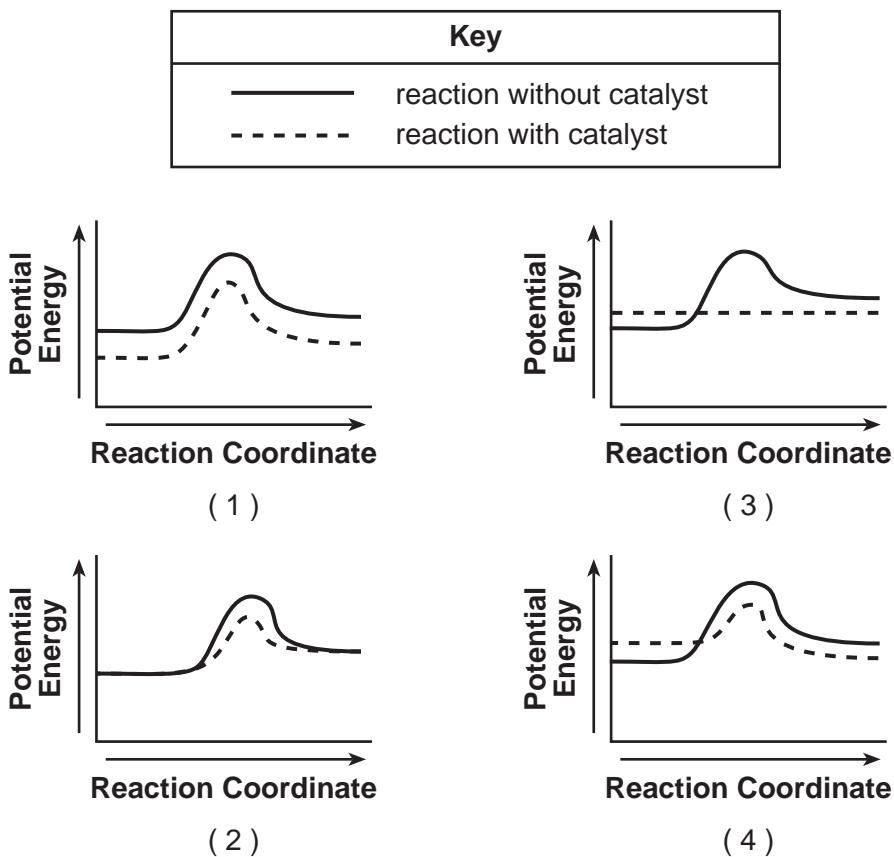

- (1) KH(s), Cl⁺(aq), and OH⁻(aq)
 - (2) K(s), Cl₂(g), and H₂O(l)
 - (3) KCl(aq) and H₂O(l)
 - (4) KOH(aq) and Cl₂(g)

47 In a titration, 20.0 milliliters of a 0.150 M NaOH(aq) solution exactly neutralizes 24.0 milliliters of an HCl(aq) solution. What is the concentration of the HCl(aq) solution?

48 What fraction of a Sr-90 sample remains unchanged after 87.3 years?

- | | |
|-------------------|-------------------|
| (1) $\frac{1}{2}$ | (3) $\frac{1}{4}$ |
| (2) $\frac{1}{3}$ | (4) $\frac{1}{8}$ |

- 49 Which potential energy diagram represents the change in potential energy that occurs when a catalyst is added to a chemical reaction?

- 50 Which balanced equation represents a spontaneous radioactive decay?

- (1) $^{14}\text{C} + \text{Ca}_3(\text{PO}_4)_2 \rightarrow 3\text{CaC}_2 + 2\text{P} + 8\text{CO}$
- (2) $^{14}_7\text{N} + {}^1_0\text{n} \rightarrow {}^{14}_6\text{C} + {}^1_1\text{p}$
- (3) $\text{H}_2\text{CO}_3 \rightarrow \text{H}_2\text{O} + \text{CO}_2$
- (4) ${}^{14}_6\text{C} \rightarrow {}^{14}_7\text{N} + {}^{-1}_0\text{e}$

Part B–2

Answer all questions in this part.

Directions (51–65): Record your answers in the spaces provided in your answer booklet. Some questions may require the use of the 2011 Edition Reference Tables for Physical Setting/Chemistry.

Base your answers to questions 51 through 53 on the information below and on your knowledge of chemistry.

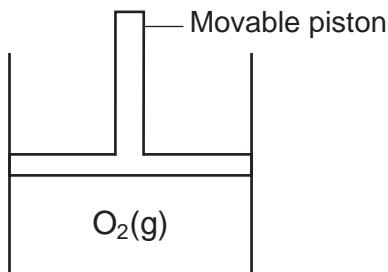

The balanced equation below represents the reaction of glucose, $C_6H_{12}O_6$, with oxygen at 298 K and 101.3 kPa.

- 51 Determine the mass of CO_2 produced when 9.0 grams of glucose completely reacts with 9.6 grams of oxygen to produce 5.4 grams of water. [1]
- 52 Compare the entropy of the reactants to the entropy of the products. [1]
- 53 Write the empirical formula for glucose. [1]
-

Base your answers to questions 54 and 55 on the information below and on your knowledge of chemistry.

The diagram below represents a cylinder with a movable piston. The cylinder contains 1.0 liter of oxygen gas at STP. The movable piston in the cylinder is pushed downward at constant temperature until the volume of $O_2(g)$ is 0.50 liter.

- 54 Determine the new pressure of $O_2(g)$ in the cylinder, in atmospheres. [1]
- 55 State the effect on the frequency of gas molecule collisions when the movable piston is pushed farther downward into the cylinder. [1]
-

Base your answers to questions 56 through 58 on the information below and on your knowledge of chemistry.

The formulas and the boiling points at standard pressure for ethane, methane, methanol, and water are shown in the table below.

Information for Four Compounds

Name	Formula	Boiling Point (°C)
ethane	$\begin{array}{c} \text{H} & \text{H} \\ & \\ \text{H}-\text{C} & -\text{C}-\text{H} \\ & \\ \text{H} & \text{H} \end{array}$	-88.6
methane	$\begin{array}{c} \text{H} \\ \\ \text{H}-\text{C}-\text{H} \\ \\ \text{H} \end{array}$	-161.5
methanol	$\begin{array}{c} \text{H} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{H} \end{array}$	64.6
water	$\begin{array}{c} \text{H} \\ \\ \text{H}-\text{O} \\ \\ \text{H} \end{array}$	100.0

56 Identify the compound that has the strongest intermolecular forces. [1]

57 State the change in potential energy that takes place in a sample of methane as it boils at -161.5°C . [1]

58 Explain, in terms of molecular polarity, why the solubility of methanol in water is greater than the solubility of methane in water. [1]

Base your answers to questions 59 through 61 on the information below and on your knowledge of chemistry.

The diagrams below represent ball-and-stick models of two molecules. In a ball-and-stick model, each ball represents an atom, and the sticks between balls represent chemical bonds.

Key
● = an atom of hydrogen
○ = an atom of carbon

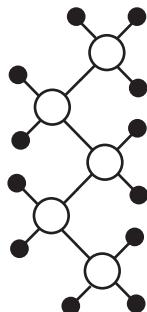

Diagram A

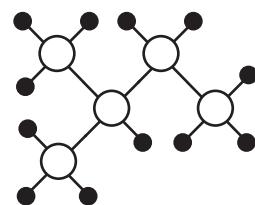

Diagram B

- 59 Draw a Lewis electron-dot diagram for an atom of the element present in all organic compounds. [1]
- 60 Explain, in terms of carbon-carbon bonds, why the hydrocarbon represented in diagram B is saturated. [1]
- 61 Explain why the molecules in diagrams A and B are isomers of each other. [1]
-

Base your answers to questions 62 and 63 on the information below and on your knowledge of chemistry.

The nuts, bolts, and hinges that attach some gates to a playground fence can be made of iron. The iron can react with oxygen in the air. The unbalanced equation representing this reaction is shown below.

- 62 Balance the equation *in your answer booklet* for the reaction, using the smallest whole-number coefficients. [1]
- 63 Determine the change in oxidation state for oxygen in this reaction. [1]
-

Base your answers to questions 64 and 65 on the information below and on your knowledge of chemistry.

The pH of various aqueous solutions are shown in the table below.

pH of Various Aqueous Solutions

Aqueous Solution	pH
HCl(aq)	2
HC ₂ H ₃ O ₂ (aq)	3
NaCl(aq)	7
NaOH(aq)	12

- 64 Complete the table *in your answer booklet* by writing the color of thymol blue in the NaCl(aq) and in the NaOH(aq) solutions. [1]
- 65 State how many times greater the hydronium ion concentration in the HCl(aq) is than the hydronium ion concentration in the HC₂H₃O₂(aq). [1]
-

Part C

Answer all questions in this part.

Directions (66–85): Record your answers in the spaces provided in your answer booklet. Some questions may require the use of the 2011 Edition Reference Tables for Physical Setting/Chemistry.

Base your answers to questions 66 through 68 on the information below and on your knowledge of chemistry.

There are six elements in Group 14 on the Periodic Table. One of these elements has the symbol Uuq, which is a temporary, systematic symbol. This element is now known as flerovium.

- 66 Identify an element in Group 14 that is classified as a metalloid. [1]
 - 67 Explain, in terms of electron shells, why each successive element in Group 14 has a larger atomic radius, as the elements are considered in order of increasing atomic number. [1]
 - 68 State the expected number of valence electrons in an atom of the element flerovium in the ground state. [1]
-

Base your answers to questions 69 through 72 on the information below and on your knowledge of chemistry.

A student made a copper bracelet by hammering a small copper bar into the desired shape. The bracelet has a mass of 30.1 grams and was at a temperature of 21°C in the classroom. After the student wore the bracelet, the bracelet reached a temperature of 33°C. Later, the student removed the bracelet and placed it on a desk at home, where it cooled from 33°C to 19°C. The specific heat capacity of copper is 0.385 J/g•K.

- 69 Explain, in terms of heat flow, the change in the temperature of the bracelet when the student wore the bracelet. [1]
 - 70 Determine the number of moles of copper in the bracelet. [1]
 - 71 Show a numerical setup for calculating the amount of heat released by the bracelet as it cooled on the desk. [1]
 - 72 Explain, in terms of chemical activity, why copper is a better choice than iron to make the bracelet. [1]
-

Base your answers to questions 73 through 75 on the information below and on your knowledge of chemistry.

Seawater contains dissolved salts in the form of ions. Some of the ions found in seawater are Ca^{2+} , Mg^{2+} , K^+ , Na^+ , Cl^- , HCO_3^- , and SO_4^{2-} .

An investigation was conducted to determine the concentration of dissolved salts in seawater at one location. A 300.-gram sample of the seawater was placed in an open container. After a week, all the water had evaporated and 10. grams of solid salts remained in the container.

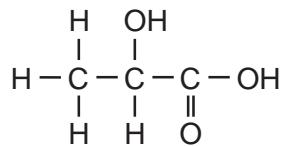

- 73 Determine the concentration, expressed as percent by mass, of the dissolved salts in the original sample of seawater. [1]

74 At standard pressure, compare the freezing point of seawater to the freezing point of distilled water. [1]

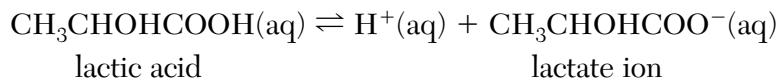

75 Explain why the evaporation that occurred during the investigation is an endothermic process. [1]

Base your answers to questions 76 through 78 on the information below and on your knowledge of chemistry.

A student makes an aqueous solution of lactic acid. A formula for one form of lactic acid is shown below.

The solution is placed in a sealed flask to be used in a laboratory investigation. The equation below represents the lactic acid equilibrium system in the flask.

- 76 Identify *one* organic functional group in a molecule of lactic acid. [1]

77 Explain, in terms of the reaction rates, why the concentrations of the reactants and products remain constant in this system. [1]

78 Explain, in terms of LeChatelier's principle, why increasing the concentration of $\text{H}^+(\text{aq})$ increases the concentration of lactic acid. [1]

Base your answers to questions 79 through 81 on the information below and on your knowledge of chemistry.

Copper can be used for water pipes in homes. When the pipes corrode, copper atoms oxidize to form Cu²⁺ ions in the water.

A homeowner has a water quality report prepared for a sample of water taken from pipes in the home. According to the report, the 550.-gram sample contains 6.75×10^{-4} gram of dissolved Cu²⁺ ions.

- 79 Using the key *in your answer booklet*, draw *two* water molecules in the box, showing the orientation of *each* water molecule toward the Cu²⁺ ion. [1]
- 80 Show a numerical setup for calculating the concentration, in parts per million, of dissolved Cu²⁺ ions in the sample of water tested. [1]
- 81 Write a balanced half-reaction equation for the corrosion that forms the Cu²⁺ ions. [1]
-

Base your answers to questions 82 through 85 on the information below and on your knowledge of chemistry.

A breeder reactor is one type of nuclear reactor. In a breeder reactor, uranium-238 is transformed in a series of nuclear reactions into plutonium-239.

The plutonium-239 can undergo fission as shown in the equation below. The X represents a missing product in the equation.

- 82 Determine the number of neutrons in an atom of the uranium isotope used in the breeder reactor. [1]
- 83 Based on Table N, identify the decay mode of the plutonium radioisotope produced in the breeder reactor. [1]
- 84 Compare the amount of energy released by 1 mole of completely fissioned plutonium-239 to the amount of energy released by the complete combustion of 1 mole of methane. [1]
- 85 Write a notation for the nuclide represented by missing product X in this equation. [1]
-

SCORING KEY AND RATING GUIDE

Directions to the Teacher:

Refer to the directions on page 2 before rating student papers.

Updated information regarding the rating of this examination may be posted on the New York State Education Department's web site during the rating period. Check this web site at: <http://www.p12.nysed.gov/assessment/> and select the link "Scoring Information" for any recently posted information regarding this examination. This site should be checked before the rating process for this examination begins and several times throughout the Regents Examination period.

Part A and Part B-1

Allow 1 credit for each correct response.

Part A

1 1	9 4	17 1	25 3
2 4	10 2	18 3	26 2
3 3	11 3	19 3	27 1
4 3	12 1	20 1	28 1
5 1	13 3	21 3	29 3
6 3	14 2	22 4	30 1
7 4	15 4	23 3	
8 1	16 3	24 3	

Part B-1

31 1	36 3	41 1	46 3
32 1	37 1	42 3	47 1
33 3	38 3	43 1	48 4
34 2	39 3	44 3	49 2
35 1	40 2	45 3	50 4

Directions to the Teacher

Follow the procedures below for scoring student answer papers for the Regents Examination in Physical Setting/Chemistry. Additional information about scoring is provided in the publication *Information Booklet for Scoring Regents Examinations in the Sciences*.

Do not attempt to correct the student's work by making insertions or changes of any kind. If the student's responses for the multiple-choice questions are being hand scored prior to being scanned, the scorer must be careful not to make any marks on the answer sheet except to record the scores in the designated score boxes. Marks elsewhere on the answer sheet will interfere with the accuracy of the scanning.

Allow 1 credit for each correct response.

At least two science teachers must participate in the scoring of the Part B–2 and Part C open-ended questions on a student's paper. Each of these teachers should be responsible for scoring a selected number of the open-ended questions on each answer paper. No one teacher is to score more than approximately one-half of the open-ended questions on a student's answer paper. Teachers may not score their own students' answer papers.

Students' responses must be scored strictly according to the Scoring Key and Rating Guide. For open-ended questions, credit may be allowed for responses other than those given in the rating guide if the response is a scientifically accurate answer to the question and demonstrates adequate knowledge, as indicated by the examples in the rating guide. On the student's separate answer sheet, for each question, record the number of credits earned and the teacher's assigned rater/scorer letter.

Fractional credit is *not* allowed. Only whole-number credit may be given for a response. If the student gives more than one answer to a question, only the first answer should be rated. Units need not be given when the wording of the questions allows such omissions.

For hand scoring, raters should enter the scores earned in the appropriate boxes printed on the separate answer sheet. Next, the rater should add these scores and enter the total in the box labeled "Total Raw Score." Then the student's raw score should be converted to a scale score by using the conversion chart that will be posted on the Department's web site at: <http://www.p12.nysed.gov/assessment/> on Wednesday, January 28, 2015. The student's scale score should be entered in the box labeled "Scale Score" on the student's answer sheet. The scale score is the student's final examination score.

Schools are not permitted to rescore any of the open-ended questions on this exam after each question has been rated once, regardless of the final exam score. Schools are required to ensure that the raw scores have been added correctly and that the resulting scale score has been determined accurately.

Because scale scores corresponding to raw scores in the conversion chart may change from one administration to another, it is crucial that, for each administration, the conversion chart provided for that administration be used to determine the student's final score.

Part B–2

Allow a total of 15 credits for this part. The student must answer all questions in this part.

- 51** [1] Allow 1 credit for 13.2 g or for any value from 13.155 g to 13.2042 g, inclusive.

- 52** [1] Allow 1 credit. Acceptable responses include, but are not limited to:

The entropy of the reactants is less than the entropy of the products.

The reactants are more ordered.

The products have greater entropy.

- 53** [1] Allow 1 credit for CH₂O. The order of the elements can vary.

- 54** [1] Allow 1 credit. Acceptable responses include, but are not limited to:

2 atm

2.0 atm

- 55** [1] Allow 1 credit. Acceptable responses include, but are not limited to:

When the piston is moved farther into the cylinder, the frequency of collisions between the molecules increases.

There will be more collisions per second.

increased frequency

- 56** [1] Allow 1 credit. Acceptable responses include, but are not limited to:

H₂O

water

- 57** [1] Allow 1 credit. Acceptable responses include, but are not limited to:

As liquid methane boils, the potential energy of the sample increases.

Potential energy increases.

higher PE

- 58** [1] Allow 1 credit. Acceptable responses include, but are not limited to:

Methanol and water molecules are polar, but methane molecules are nonpolar.

The compounds methanol and water have similar polarities.

- 59** [1] Allow 1 credit. The positions of the dots can vary.

Examples of 1-credit responses:

- 60** [1] Allow 1 credit. Acceptable responses include, but are not limited to:

The molecule in diagram *B* has only single carbon-carbon bonds.

There are no multiple bonds between the carbon atoms.

Cannot add more H atoms to the C atoms because all C–C bonds are single.

- 61** [1] Allow 1 credit. Acceptable responses include, but are not limited to:

Both molecules have the same molecular formula, but have different structural formulas.

Both molecules are composed of 5 carbon atoms and 12 hydrogen atoms, but differ in the arrangement of their atoms.

- 62** [1] Allow 1 credit for 4 Fe(s) + 3 O₂(g) → 2 Fe₂O₃(s).

63 [1] Allow 1 credit. Acceptable responses include, but are not limited to:

From 0 to -2

From 0 to $2-$

From zero to negative two

64 [1] Allow 1 credit.

Example of a 1-credit response:

Aqueous Solution	Color of Thymol Blue
NaCl(aq)	yellow
NaOH(aq)	blue

65 [1] Allow 1 credit. Acceptable responses include, but are not limited to:

10

ten

tenfold

10 times

Part C

Allow a total of 20 credits for this part. The student must answer all questions in this part.

- 66** [1] Allow 1 credit. Acceptable responses include, but are not limited to:

Si

germanium

element 32

- 67** [1] Allow 1 credit. Acceptable responses include, but are not limited to:

The atomic radius of these elements increases down the group because each successive element has one more electron shell.

The number of shells per atom increases.

- 68** [1] Allow 1 credit. Acceptable responses include, but are not limited to:

4

four

$4e^-$

four valence electrons

- 69** [1] Allow 1 credit. Acceptable responses include, but are not limited to:

The bracelet temperature increased because heat flowed from the body to the copper.

Energy is transferred from the student to the bracelet.

Heat is absorbed by the bracelet.

- 70** [1] Allow 1 credit for 0.474 mol or for any value from 0.47 mol to 0.47402 mol, inclusive, or for 0.5 mol.

- 71** [1] Allow 1 credit. Acceptable responses include, but are not limited to:

$$q = (30.1 \text{ g})(0.385 \text{ J/g} \cdot \text{K})(19^\circ\text{C} - 33^\circ\text{C})$$

$$(30.1 \text{ g})(306 \text{ K} - 292 \text{ K})(0.385 \text{ J/g} \cdot \text{K})$$

$$(0.385)(30.1)(14)$$

72 [1] Allow 1 credit. Acceptable responses include, but are not limited to:

Copper is less chemically active than iron, so copper is less likely to react with substances in the air or on the skin.

Iron is more active.

Fe oxidizes more easily.

73 [1] Allow 1 credit. Acceptable responses include, but are not limited to:

3.3%

3%

3.3333%

74 [1] Allow 1 credit. Acceptable responses include, but are not limited to:

Water has a higher freezing point than seawater.

Seawater's is lower.

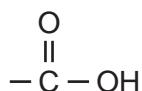

75 [1] Allow 1 credit. Acceptable responses include, but are not limited to:

Energy is needed to overcome the intermolecular forces.

Energy is required to change liquid water to water vapor.

The heat of vaporization is positive.

76 [1] Allow 1 credit. Acceptable responses include, but are not limited to:

alcohol group

acid

hydroxyl

carboxyl

Note: Do not allow credit for OH^- or hydroxide.

- 77** [1] Allow 1 credit. Acceptable responses include, but are not limited to:

The rate of the forward reaction equals the rate of the reverse reaction.

The reaction rates are the same at equilibrium.

- 78** [1] Allow 1 credit. Acceptable responses include, but are not limited to:

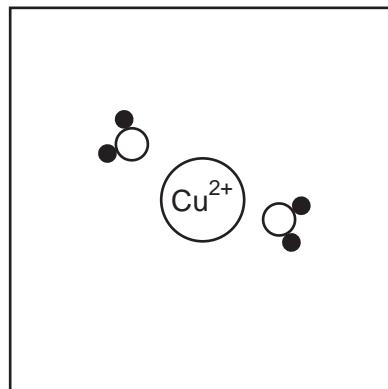

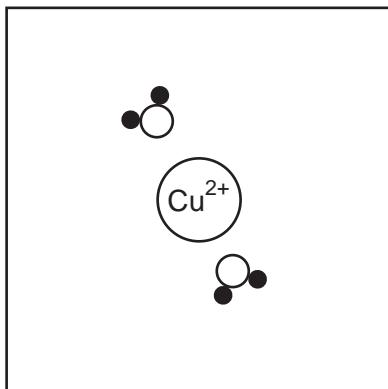

The stress of adding H⁺ ions shifts the equilibrium to the left, producing more lactic acid.

Increasing the concentration of H⁺(aq) favors the reverse reaction.

More H⁺ ions collide with lactate ions, shifting the equilibrium left.

- 79** [1] Allow 1 credit. Acceptable responses must show *at least two* water molecules. The oxygen atom of each water molecule must face toward the copper ion.

Examples of 1-credit responses:

- 80** [1] Allow 1 credit. Acceptable responses include, but are not limited to:

$$\frac{6.75 \times 10^{-4} \text{ g}}{5.50 \times 10^2 \text{ g}} \times 10^6$$

$$\frac{0.000675}{550} \times 1000000$$

$$\frac{6.75 \times 10^{-4}}{550} \times 1000000$$

- 81** [1] Allow 1 credit. Acceptable responses include, but are not limited to:

82 [1] Allow 1 credit for 146.

83 [1] Allow 1 credit. Acceptable responses include, but are not limited to:

alpha

α

$\frac{4}{2}\alpha$

^4_2He

84 [1] Allow 1 credit. Acceptable responses include, but are not limited to:

The fission of one mole of Pu-239 releases much more energy than the combustion of one mole of CH_4 .

The energy released during the chemical reaction is less than the energy released during the nuclear reaction.

greater for $^{239}_{94}\text{Pu}$

85 [1] Allow 1 credit. Acceptable responses include, but are not limited to:

$^{144}_{58}\text{Ce}$

^{144}Ce

cerium-144

Ce-144

Regents Examination in Physical Setting/Chemistry

January 2015

Chart for Converting Total Test Raw Scores to Final Examination Scores (Scale Scores)

The *Chart for Determining the Final Examination Score for the January 2015 Regents Examination in Physical Setting/Chemistry* will be posted on the Department's web site at: <http://www.p12.nysed.gov/assessment/> on Wednesday, January 28, 2015. Conversion charts provided for previous administrations of the Regents Examination in Physical Setting/Chemistry must NOT be used to determine students' final scores for this administration.

Online Submission of Teacher Evaluations of the Test to the Department

Suggestions and feedback from teachers provide an important contribution to the test development process. The Department provides an online evaluation form for State assessments. It contains spaces for teachers to respond to several specific questions and to make suggestions. Instructions for completing the evaluation form are as follows:

1. Go to <http://www.forms2.nysed.gov/emsc/osa/exameval/reexameval.cfm>.
2. Select the test title.
3. Complete the required demographic fields.
4. Complete each evaluation question and provide comments in the space provided.
5. Click the SUBMIT button at the bottom of the page to submit the completed form.

Map to Core Curriculum

January 2015 Physical Setting/Chemistry			
Question Numbers			
Key Ideas/Performance Indicators	Part A	Part B	Part C
	Standard 1		
Math Key Idea 1		36, 38, 43, 54	71, 73, 80
Math Key Idea 2		62	
Math Key Idea 3		48, 51, 54, 63	70, 73, 82, 85
Science Inquiry Key Idea 1		34, 42, 43, 55, 57, 58, 60, 61, 65	67, 68, 69, 74, 75, 76, 77, 79, 84

To determine the student's final examination score, find the student's total test raw score in the column labeled "Raw Score" and then locate the scale score that corresponds to that raw score. The scale score is the student's final examination score. Enter this score in the space labeled "Scale Score" on the student's answer sheet.

Schools are not permitted to rescore any of the open-ended questions on this exam after each question has been rated once, regardless of the final exam score. Schools are required to ensure that the raw scores have been added correctly and that the resulting scale score has been determined accurately.

Because scale scores corresponding to raw scores in the conversion chart change from one administration to another, it is crucial that for each administration the conversion chart provided for that administration be used to determine the student's final score. The chart above is usable only for this administration of the Regents Examination in Physical Setting/Chemistry.
