The given line  $h$ ,  $2x + y = 1$ , does not pass through the center of dilation, the origin, because the  $y$ -intercept is at  $(0, 1)$ . The slope of the dilated line,  $m$ , will remain the same as the slope of line  $h$ ,  $-2$ . All points on line  $h$ , such as  $(0, 1)$ , the  $y$ -intercept, are dilated by a scale factor of 4; therefore, the  $y$ -intercept of the dilated line is  $(0, 4)$  because the center of dilation is the origin, resulting in the dilated line represented by the equation  $y = -2x + 4$ .

REF: spr1403geo

13 ANS: 4

Another equation of line  $t$  is  $y = 3x - 6$ .  $-6 \cdot \frac{1}{2} = -3$

REF: 012319geo

14 ANS: 2

The line  $y = 2x - 4$  does not pass through the center of dilation, so the dilated line will be distinct from  $y = 2x - 4$ . Since a dilation preserves parallelism, the line  $y = 2x - 4$  and its image will be parallel, with slopes of 2. To obtain the  $y$ -intercept of the dilated line, the scale factor of the dilation,  $\frac{3}{2}$ , can be applied to the  $y$ -intercept,

$(0, -4)$ . Therefore,  $\left(0 \cdot \frac{3}{2}, -4 \cdot \frac{3}{2}\right) \rightarrow (0, -6)$ . So the equation of the dilated line is  $y = 2x - 6$ .

REF: fall1403geo

15 ANS: 4

The line  $y = \frac{3}{2}x - 4$  does not pass through the center of dilation, so the dilated line will be distinct from

$y = \frac{3}{2}x - 4$ . Since a dilation preserves parallelism, the line  $y = \frac{3}{2}x - 4$  and its image will be parallel, with slopes of  $\frac{3}{2}$ . To obtain the  $y$ -intercept of the dilated line, the scale factor of the dilation,  $\frac{3}{4}$ , can be applied to the

$y$ -intercept,  $(0, -4)$ . Therefore,  $\left(0 \cdot \frac{3}{4}, -4 \cdot \frac{3}{4}\right) \rightarrow (0, -3)$ . So the equation of the dilated line is  $y = \frac{3}{2}x - 3$ .

REF: 011924geo

16 ANS: 2

$$3y = -6x + 3$$

$$y = -2x + 1$$

REF: 062319geo

17 ANS: 4

The line  $y = 3x - 1$  passes through the center of dilation, so the dilated line is not distinct.

REF: 081524geo

18 ANS: 2

The line  $y = -3x + 6$  passes through the center of dilation, so the dilated line is not distinct.
